## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance: the examiner is unaware of any prior art which suggests a non-volatile semiconductor memory device that utilizes the single layer conductor configuration such that the source and drain of the floating gate transistor is formed in a first well and the control gate impurity region is formed in a second well while an emitter for a bipolar transistor is located in the first well so that the first well acts as a base region and the channel region acts as a collector region.
3. Oyama (USPN 6,013,552) discloses a non-volatile memory device. However this memory device does not use the single layer conductor structure of the application. Therefore the Oyama device does not teach the applicant's invention.
4. Maurelli et al. (USPN 5,936,276) discloses a non-volatile memory device. Although this particular device uses a single layer conductor structure with control gate impurity region, there is no mention of a bipolar transistor. Maurelli discloses the formation of well regions but this discussion is limited to the formation of the control gate impurity region. Thus Maurelli does not teach the applicant's device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***
